ESupport Note

Reset the EM120 module settings

- Download and run the application which resets the EM120 module settings back to their Trimble factory settings. This file may be sent externally to dealers / end users.
 - Download the <u>CirronetReset</u> executable file to the TSC7.
 - Attach the EM120 module to the TSC7.
 - Double tap the executable file to launch it.
 - A dialog box will appear after a few seconds when the reset is complete:

EM120 5	Site Radio Information	×
1	Serial Number 365878 Please remove and reattach the module before using	
	ОК	

• If the executable file is ran again before the module is removed and reattached, you may get the following message:

- Remove the EM120 module and reattach to the TSC7.
- Attempt to connect to the Total Station again.
